Education

- VIT Bhopal University**

B.Tech. in Computer Science and Engineering — CGPA: 9.20

May 2026

Experience

- BotGauge AI**

Jan 2026 – Present

Role: Backend Developer Intern

Tech: Python, Go, FastAPI, LangChain, RAG, AWS, REST APIs, Distributed Systems, WebRTC

- Engineered backend systems supporting AI testing workflows and distributed execution pipelines.
- Built telemetry infrastructure capturing browser events, latency metrics and execution traces.
- Developed Go telemetry sidecars capturing browser payloads, metadata and request-response streams.
- Implemented CDP-based device emulation workflows enabling adaptive resolution and stream switching.
- Designed multi-agent pipelines validating Playwright actions using feedback-driven correction loops.
- Collaborated on AI evaluation workflows improving agent reliability and execution consistency.

Skills

- **Programming:** Python, SQL, C++, JavaScript, Object-Oriented Programming, Data Structures
- **AI & Machine Learning:** Machine Learning, Deep Learning, NLP, Generative AI, Transformers, Regression, Classification, Clustering, Model Evaluation
- **LLM Systems:** LangChain, RAG, Embeddings, Vector Search, Search Algorithms, AI Agents, Prompt Engineering, Tokenization, Attention Mechanisms
- **Frameworks & Libraries:** Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, spaCy, Hugging Face
- **Web & Cloud:** FastAPI, Django, React.js, REST APIs, PostgreSQL, AWS, Git, GitHub, Docker

Projects

- AI Research Consensus Engine** 🔗

Jan 2026 - Feb 2026

Tech Stack: Python, LangChain, RAG, Vector Search, Embeddings, Open-Source LLMs, NLP

- Built RAG pipelines combining embeddings, chunking, retrieval and semantic ranking across sources.
- Implemented prompt-engineered synthesis workflows generating structured evidence-grounded summaries.
- Evaluated LLM-generated outputs against source consistency, retrieval quality and hallucination risks.

- MiniGPT – Transformer-based Language Model** 🔗

May 2025 – Sept 2025

Tech Stack: Python, PyTorch, Transformers, Tokenization, Attention Mechanisms

- Developed a transformer-based language model using custom tokenization, embeddings and self-attention.
- Built transformer blocks with residual connections, layer normalization and next-token prediction.
- Optimized training workflows using batching, gradient clipping and multi-head attention scaling.

- Bollywood Bias Buster – Gender Stereotype Detection** 🔗

Ongoing

Tech Stack: Python, spaCy, Hugging Face Transformers, TensorFlow, NLP, Deep Learning

- Built an AI system using transformer models to detect gender stereotypes across Bollywood scripts.
- Designed NLP pipelines using NER, co-reference resolution and bias lexicons for sentiment analysis.
- Generated context-aware bias-free rewrites while preserving narrative intent and consistency metrics.

Achievements

- **Lakecity Hack 2024 (Winner):** Proposed smart glasses leveraging Computer Vision & NLP to convert hand signals into speech and spoken words into subtitles, enhancing accessibility and inclusive communication.
- **Flipkart Grid 7.O:** Reached the semi-finals among 1.6L+ participants, showcasing problem-solving skills.

Activities

- **Content Lead, Android Club:** Started technical blogging on Android updates; guided juniors forward.
- **Sports:** Gold medals in Arambh22 Basketball (Defender) and Advitya23 Cricket (Team Event).

Hobbies

- Mandala art, table tennis, basketball, and cooking.
